Editorial Policies

ISRES Publishing follows the steps below in the proceedings book publishing process.

In the first stage, the papers sent to the conferences organized by ISRES are subject to editorial oversight. In the second stage, the papers that pass the first step are reviewed by at least two international field experts in the conference committee in terms of suitability for the content and subject area. In the third stage, it is reviewed by at least one member of the organizing committee for the suitability of references. In the fourth step, the language editor reviews the language for clarity.

Review Process

Abstracts and full-text reports uploaded to the conference system undergo a review procedure. Abstracts will be evaluated on the basis of abstracts/proposals. The conference system allows the full text to be sent if the abstract is accepted. Participants must wait for the evaluation results after uploading their article abstracts to the conference system. If their abstracts are accepted, they can upload their full texts to the conference system. The full texts are then sent to at least two reviewers for review. The conference has a double-blind peer-review process. Any paper submitted for the conference is reviewed by at least two international reviewers with expertise in the relevant subject area. Based on the reviewers' comments, papers are accepted, rejected or accepted with revision. If the comments are not addressed well in the improved paper, then the paper is sent back to the authors to make further revisions. The accepted papers are formatted by the conference for publication in the proceedings.

Aims & Scope

In the past, accessing information was tiring both financially and morally, but today, thanks to technology, it is easier and faster to access information. With this feature, technology not only makes daily life easier, but also accelerates the developments in science. Therefore, the focus of the conference is to share the studies on the developments in technology and the applications of technology in fields such as science and engineering by the participants. Studies in the fields of technology are accepted to the conference.

The aim of the conference is to bring together researchers and administrators from different countries, and to discuss theoretical and practical issues in the field of technology. At the same time, being aware of the applications of technology in different fields (such as engineering) is among the objectives of the conference.
